PROFILE

I am a Frontend web developer with experience in React, specializing in creating attractive and functional user interfaces with a "Mobile First" approach and strict typing using TypeScript. I utilize modern technologies and popular tools such as Tailwind, Styled Components, Sass, Material UI, and handle routing and state management with React Router and Zustand. Additionally, I am practicing Node.js for backend development and have an interest in FullStack development.

WORK EXPERIENCE

ServiOriente – (Freelancer) (July 2023 – Present)

Working as FrontEnd Developer and UI/UX Designer, developing a CRM for the administration and centralization of social networks or media with current and potential clients. It has been developed in technologies such as Next.js, TypeScript and Mantine UI, in addition to Zustand for global state management.

PROJECTS

CRM – Centralization and Administration of Social Networks

Next.js | Typescript | Zustand | Mantine UI | Figma

Project that I am currently working on, for a company located in Venezuela, I have been in charge of the entire design of the graphical interface in Figma and the development of the CRM through Next.js.

Fake Commerce

React | Tailwind | TypeScript | React Router | Vite | API Context

A basic model of an E-Commerce website to understand and handle concepts such as application context, component styling, code best practices and refactoring, and implementation of TypeScript for strict typing.

Weather App

React | Tailwind | TypeScript | React Router | Vite | Zustand

An application created to understand global state management using the Zustand state library, as well as fetching data from multiple endpoints and proper data management.
